Phone number: (+420) 777876728 (Mobile) | **Email address:** adrian@boscu.ro | **LinkedIn:** https://www.linkedin.com/in/adrian-alexandru-boscu/

ABOUT ME

A highly motivated, due-diligent and results focused CyberSecurity analyst and Senior Network Security Architect who has professional cross-industry experience, primarily within information technology services. Experienced in advising clients and executives, planning and delivering cutting edge network solutions to global businesses, ensuring best practices within network architecture and configuration, using an analytical approach to problem solving, triaging and resolving complex and high impact issues with due-diligence, improving general IT services and exceeding expectations set by colleagues and leaders.

WORK EXPERIENCE

AWS CYBERSECURITY ENGINEER – NETWORK SECURITY, AUTOMATION & FIREWALL GOVERNANCE – NXP SEMICONDUCTORS – 09/2024 – REMOTE, ROMANIA

As part of the AWS Cybersecurity Engineering team, I focused on securing cloud network infrastructure with strong emphasis on **firewall automation, governance, and audit-ready change management**. I developed and operated scalable security controls to ensure consistent policy enforcement, compliance, and operational efficiency across cloud environments.

- Collaborated within the AWS Cybersecurity Engineering team to enhance **network and firewall security architecture** in large-scale cloud environments.
- Designed, deployed, and managed **Palo Alto Networks NGFW cloud instances**, performing firewall rule analysis, policy implementation, optimization, and lifecycle management.
- Applied **automation techniques (API-driven workflows, scripting)** to streamline firewall configuration changes, reduce manual errors, and maintain policy consistency across environments.
- Supported **firewall governance and audit compliance** by enforcing standardized change processes, rule ownership, exception handling, and traceability of firewall modifications.
- Integrated firewall change activities with **ITSM / ServiceNow-driven workflows**, ensuring that firewall updates followed approved request, validation, and implementation paths.
- Contributed to **firewall rule recertification and periodic reviews**, validating business justification, least-privilege access, and compliance with internal and regulatory requirements.
- Participated in reconciliation of **network changes versus firewall policies**, supporting continuous compliance and audit readiness (conceptually aligned with platforms such as Tufin).
- Led **Prisma Cloud / Prisma Access deployments**, implementing centralized visibility, policy enforcement, and governance across AWS environments.
- Implemented and tuned **IDS/IPS controls** to proactively detect and mitigate network-level threats.
- Conducted **vulnerability assessments and security control validation**, identifying misconfigurations and improving overall firewall and network posture.
- Actively supported **incident response activities**, assisting in investigation, containment, and remediation of network-related security incidents.
- Collaborated closely with **network, security, and IT teams** to define security best practices, reporting requirements, and compliance metrics.
- Evaluated and recommended **security automation tools and integrations**, staying aligned with evolving cloud security and firewall governance standards.

Technologies & Platforms:
Amazon Web Services (AWS), Palo Alto Networks NGFW, Prisma Cloud / Prisma Access, Firewall Automation (APIs & scripting), IDS/IPS, ServiceNow (ITSM integration), Zscaler, Vulnerability Assessment & Penetration Testing, Incident Response Tooling

CYBERSECURITY SOLUTION ARCHITECT – HALEON – 07/2023 – 08/2024 – UNITED KINGDOM

As a Security Architect, I have been instrumental in designing and implementing secure network architectures using Elisity. My role has been pivotal in ensuring the security of our systems while facilitating the migration from local architecture to Elisity-based Architecture.

- Led the migration from local architecture to Elisity-based Architecture, involving significant stakeholder engagement at both central and local country levels.
- Responsible for overall migration planning of different implementation waves with local country sites.
- Created, coordinated, monitored, and communicated migration status and activities, including asset registers and test plans.
- Tracked, mitigated, resolved, and escalated systematic and individual implementation risks and issues as required.
- Worked with implementation teams, Operations, Business and Service owners, and Infrastructure managers on pre-and post-migration activities, including maintaining runbooks and all Operational Handover activities.
- Worked with partners and vendors, leading cross-functional and multiple partner organizations.
- Demonstrated solid understanding of networking with experience from Cisco Products/Devices/Services, Network Security / Firewalls such as Palo Alto / Ilummio, Zscaler or equivalent as well as TechX.
- Collaborated with OT teams to assess and secure critical infrastructure, aligning security controls with NIST 800-82 and IEC 62443 frameworks.
- Led the risk assessment and mitigation strategies for OT networks, identifying vulnerabilities in legacy systems and implementing compensating security controls.
- Worked with vendors and implementation teams to deploy Zero Trust security principles within both IT and OT environments, ensuring seamless yet secure connectivity.
- Developed security guidelines for OT/ICS assets to maintain compliance with corporate security policies and regulatory requirements.

NETWORK PRODUCTION SUPPORT ENGINEER – EUROCLEAR – 01/2023 – 06/2023 – REMOTE, BELGIUM

In my role at Euroclear I provided operational and project support for a large-scale enterprise network and security infrastructure, contributing to the stability, availability, and continuous improvement of production and test environments within a regulated financial-services context.

- Supported day-to-day operations and monitoring of enterprise network and security infrastructure, including routers, switches, firewalls, load balancers, DDI, and access control systems.
- Operated and maintained LAN/WAN and Software-Defined Networking environments, with exposure to Cisco ACI–based architectures.
- Performed incident, alert, and service request resolution, ensuring network stability, performance, and adherence to operational SLAs.
- Actively contributed to the enhancement of monitoring and alerting capabilities, improving visibility and proactive issue detection across the network estate.
- Installed, configured, and supported network and security platforms, including Cisco switching and routing, F5, Palo Alto Networks, and Check Point firewalls.
- Provided operational support for Cisco Wireless Controllers and Access Points, ensuring reliable enterprise wireless connectivity.
- Assisted with troubleshooting complex network issues, applying strong analytical and diagnostic skills in collaboration with cross-functional teams.
- Maintained and updated network documentation, ensuring accuracy of designs, configurations, and operational procedures.
- Supported network-related projects, contributing to enterprise upgrades, service improvements, and introduction of new initiatives.
- Participated in network optimization and automation initiatives, improving operational efficiency and standardization of network services.
- Worked closely with security, infrastructure, and application teams to ensure secure and resilient network operations.
- Operated effectively in a fast-paced, process-driven environment, delivering high-quality outcomes while adhering to established operational standards.

Technologies & Platforms:
Cisco Switches & Routers, Cisco Wireless Controllers & APs, Cisco ACI, Palo Alto Networks NGFW, Check Point, F5, DDI, Network Monitoring & Alerting Platforms, Enterprise LAN/WAN, Network Automation (introductory / operational exposure)

NETWORK SECURITY CONSULTANT – NTT BARCELONA – 02/2022 – 09/2022 – BARCELONA, SPAIN

As part of the team in the NTT project in Barcelona, I was responsible for providing networking operational services for their EU restricted customers. As part of the team, I was responsible for jumpstarting the team from a technical perspective as well as providing guidance in operational and day to day activities. At the same time I was responsible

for delivering and maintaining solutions for different network parts such as Security, Routing and Switching, Load balancing, DHCP/DNS, Wireless, and many more.

As part of primary duties and responsibilities were as follows:

- Troubleshoot and diagnose manufacturing site-specific issues
- Troubleshoot and diagnose end-user office issues ranging from blocked websites, wireless topics, and many more.
- Create new documentation and update new ones, as well as create new processes and procedures.
- Provide technical and procedural guidance for all the L1-L2 engineers
- Act as an escalation point for lower tiers engineers.
- Cisco ASA, CheckPoint and F5 SME for the project.

Technologies vendors and products part of this project:
Cisco routers/switches/firewalls, Checkpoint Firewalls, F5, Juniper, Palo Alto.

SENIOR NETWORK & CYBERSECURITY ENGINEER – FUJITSU PROVIDING SERVICES FOR EEAS (EUROPEAN EXTERNAL ACTION SERVICE) – 08/2021 – 05/2022 – BRUXELLES, BELGIUM

Working as part of the team supporting and deploying new projects for EEAS (European External Action Services) HQ and Delegations. As a Senior System Administrator in the project team we cover multiple tasks requested by the EEAS such as:

- End-to-end Implementation of architected solutions following a Low-level design provided by the architects
- Offer support and technical consultancy for ongoing projects.
- Implementation of changes related to the delivery of various solutions as part of a project but following the ITIL processes
- Deliver quality and detailed documentation related to the implemented services which cover but are not limited to Installation and configuration Guides, Operational procedures, various other services related mandatory documentation
- Drafting operational guidelines, procedures, installation notices, and scripts for the integration, installation, and upgrade of aforementioned component services;
- Perform knowledge transfer, service handover to operations and offer assistance with the roll-out of new ICT infrastructure projects;
- Operate following the defined ITIL processes and procedures;
- Intervention on ICT infrastructure (routers, switches, firewalls, F5 LB, etc);
- Development of scripts for automation of tasks and deployments

Technologies vendors and products part of this project:
Cisco ACI, Cisco routers/switches, Aruba Networks, Palo Alto NGFW, Panorama, Splunk

CYBERSECURITY & NETWORK SOLUTION ARCHITECT – HCL PROVIDING SERVICES FOR NOVARTIS
– 09/2020 – 12/2021 – PRAGUE, CZECHIA

Assist remote production sites in remediating vulnerabilities as well as creating improvement strategies for application and infrastructure hosted on-site. Minimize downtime for implementation and assist in integrating the local site in the global security policies, standards, and frameworks.

- Analyze High-Level Remediation/Recommendation Plan provided for 3rd part security consultant services to make sure that they are feasible and understandable
- Investigating, designing, planning, and implementing communications networks
- Responsible for cybersecurity availability and planning such as backup and restore and disaster recovery.
- Perform risk and vulnerability assessment applied for OT on GxP environment.
- Drive any specific issues alongside SOC team as part of IRT group.
- Supported remote production sites in remediating OT-specific vulnerabilities, ensuring the security and resilience of industrial control systems (ICS) and SCADA environments.
- Performed OT risk and vulnerability assessments in GxP-regulated environments, applying security frameworks such as NIST 800-82 and IEC 62443 to strengthen industrial cybersecurity.
- Analyzed and validated remediation plans provided by third-party security consultants, ensuring feasibility and alignment with OT security best practices.
- Designed and implemented secure communications networks for OT environments, balancing operational uptime with robust cybersecurity controls.
- Led cybersecurity availability planning for OT infrastructure, implementing backup, restore, and disaster recovery strategies tailored to industrial operations.
- Optimized firewall and network segmentation strategies (Palo Alto NGFW, Cisco) to enhance protection for industrial automation systems and critical infrastructure.
- Developed security improvement strategies for on-site OT applications and infrastructure, integrating local sites into global security policies, standards, and frameworks.

Technologies vendors and products part of this project:
Cisco routers/switches/firewalls , Palo Alto NGFW, Panorama, Splunk

CyberSecurity methodologies and tools:
NIST, OWASP, ISO27000&ISO27001, Qualis, Nesus

CYBERSECURITY & NETWORK SOLUTION ARCHITECT – THE ADECCO GROUP – 02/2020 – 09/2020 – PRAHA, CZECHIA

As part of this project, I was responsible for providing consultancy in assessment and remediation activities needed on the Global Adecco group environment which was hosting critical applications for the business. I was also responsible for defining strategy planning as well as remediation planning to ensure business continuity and security for a continuously developing business.

- Ensure that applications/solution and their components (databases, web services, etc.) use a restrictive and accurate set of Firewall rules to allow network traffic only for applications, ports, IPs, and necessary protocols.
- Ensure that applications/solution and infrastructure components are placed in the correct zones in our environment in order to segregate the risky high data, reduce the attack surface, and improve security
- Perform and define cybersecyrity standards as part of the Security Governance team by defining specific internal processes and procedures as per industry standards (NIST, OWASP, ISO27000 and ISO27001 etc.)
- Analyze High-Level Remediation/Recommendation Plan provided for 3rd part security consultant services to make sure that they are feasible and understandable
- Partnering with application owner and other peers to develop a detailed implementation plan.
- Investigating, designing, planning, and implementing communications networks
- Preparing network schematics to define and illustrate network design solutions
- Submit Change request that will be executed for 3rd party vendor
- Perform risk assessments and vulnerability management activities as part of the application assessments as well as manage and track any specific vulnerability and risk management lifecycle.
- Participate with Stakeholders in system security lifecycle and design processes, concepts, methods and tools.
- Define and design cybersecurity standards according to existing industry cybersec standards (ISO27000/ ISO27001, NIST, OWASP)
- Participate in Audits

Technologies vendors and products part of this project:
Cisco routers/switches/firewalls , Palo Alto NGFW, Panorama, Splunk

CyberSecurity methodologies, frameworks and tools:
NIST, ISO27000&ISO27001, Qualis

SENIOR NETWORK CONSULTANT – NTT – 02/2019 – 01/2020 – PRAGUE, CZECHIA

As part of the team in the NTT project, I was responsible for providing networking operational services for BMW, one of the biggest customers of NTT. As part of the team, I was responsible for delivering and maintaining solutions for different network parts such as Security (proxy and firewall), Routing and Switching, Load balancing, DHCP/DNS, Wireless, and many more. As part of primary duties and responsibilities were as follows:

- Troubleshoot and diagnose manufacturing site-specific issues
- Troubleshoot and diagnose end-user office issues ranging from blocked websites, wireless topics, and many more.
- Create new documentation and update new ones, as well as create new processes and procedures.
- Provide technical and procedural guidance for all the L1-L2 engineers
- Act as an escalation point for lower tiers engineers.
- BlueCoat Proxy and F5 SME for the project.

Technologies vendors and products part of this project:
Cisco routers/switches/firewalls, BlueCoat Proxy, F5, Cisco ACI, Splunk

CYBERSEC ANALYST – HCL PROVIDING SERVICES FOR NOVARTIS – 04/2018 – 01/2019 – PRAGUE, CZECHIA

As part of the team in Novartis, we were responsible for analyzing and onboarding new applications that are considered Crown Juels and critical for the business into a new, more secure environment called RingFencing.
The primary responsibilities of the role were:

- Assist in vulnerability assessment and gap recognition of the application
- Create an onboarding plan and strategy for the application into the new environment
- Assist in migrating the assets and creating proper application id into the PaloAlto Firewalls and F5 WAF.

- Troubleshoot and support migration issues, if any, alongside the application team.
- Participate in RFP creation and vendor selection for the operation of the solution designed.
- Lead, define and implement vendor security and ensure security standards are applied by the vendor conforming to existing GxP environment.

Technologies vendors and products part of this project:
PaloAlto NGF, PaloAlto LightCyber, Cisco Routers/Switches, BigIP-F5 (WAF), Splunk
CyberSecurity methodologies and tools:
NIST, OWASP, ISO27000&ISO27001, Qualis, Nesus

TECHNICAL TEAM LEAD – AMAZON – 01/2017 – 03/2018 – PRAGUE, CZECHIA

As part of the team in Amazon, I was responsible for being an escalation point from a process/technical perspective for all our team members and managing high severity call leading and driving issues to a fast resolution for reduced customer-facing impact.

Responsibilities:
- Develop and keep documentation updated
- Troubleshoot and document complex issues/problems
- Contribute to the operation of our customer environments
- Maintaining and developing the operation environment within my technology area(s).
- Contributing to optimization initiatives
- Planning and execution of own tasks in the networking segment
- Personal development, i.e., recommending and taking responsibility for private business, competency and development targets and activities.

Technologies vendors and products part of this project:
AWS, Cisco Meraki, Cisco ASA, DNS/DHCP

OPERATION SPECIALIST – NNIT – 07/2014 – 12/2016 – PRAHA, CZECHIA

Business or Sector: Information and communication

As part of the networking team, I managed and maintained different vendor networks such as Paloalto, Cisco, and many more. I provided support to various infrastructures for several Danish customers, including GxP and Pharma customers. I maintained and troubleshot different technologies addressing various fields from wireless to routing, load balancing, and security.

Responsibilities:
- Contribute to the operation of our customer environments
- Maintaining and developing the operation environment within your technology area(s).
- Contributing to optimization initiatives
- Planning and execution of own tasks
- Personal development, i.e., recommending and taking responsibility for private business, competency, and development targets and activities.
- Develop and keep documentation updated

Networking:
- Maintaining and troubleshooting Paloalto firewalls
- Troubleshoot two ways authentification factors (SMS Passcode)
- DNS, DHCP
- Switching: VLANs, Private VLANs, VTP, STP
- Routing: EIGRP, OSPF, BGP
- Security & NAT rules, site-to-site, and Remote Access VPNs, DMVPN (ASA)
- Redundancy: EtherChannels, HSRP, VRRP
- Load-balancing solutions (CISCO)
- Network monitoring: Syslog, SNMP; HP NNMI
- Cisco Wireless (Access Points and Wireless Domain Controller)

Technologies vendors and products part of this project:
Cisco Switches/Routers/Firewalls/Wireless, PaloAlto NGFW, F5 LTM, DNS/DHCP

2ND LEVEL NETWORK ENGINEER – AT&T – 10/2011 – 06/2014 – BRNO, CZECHIA

As part of the networking team, I was in charge of incidents resolution and change implementation for French Customers and IBM France Bluesky Project. At that time, IBM Bluesky counted more than 100 french customers having their distinctive networks, and on a day-to-day basis, I was in charge of maintaining and troubleshooting any problem within those networks. Working with such large networks implies working with Partners such as NCR to replace faulty equipment or ISP to solve particular WAN issues. Thanks to my communication skills, I was also the bridge between technical and non-technical team segments.

Networking:

- Advanced knowledge load-balancing solutions (BigIP F5)
- Advanced knowledge of security & NAT rules, site-to-site and Remote Access VPNs (ASA, Checkpoint)
- DNS/DHCP
- Switching: VLANs, Private VLANs, VTP, STP
- Routing: EIGRP, OSPF
- Redundancy: EtherChannels, HSRP, VRRP, Checkpoint ClusterXL solution, Nokia IP cluster
- Bluecoat PacketShaper and PolicyCenter products
- Bluecoat ProxySG solution
- Network monitoring: Syslog, SNMP, Vitalnet Suite

Technologies vendors and products part of this project:
Cisco Switches/Routers/Firewalls, Checkpoint Firewalls, F5 LTM, BlueCoat Proxy, DNS/DHCP

2ND LEVEL IT SPECIALIST, SECURITY SPECIALIST – IBM – 11/2010 – 09/2011 – BRNO, CZECHIA

As a 2nd level security analyst, the primary responsibility was to verify that all the equipment under our scope was compliant with IBM's vast set of security standards. This ensured that all equipment under our responsibility was up to date with our internal policies and industry standards in terms of security. At the same time, the team operating them had good practice standards in configuring the mentioned network devices.
I correlated data repositories, process descriptions, and configuration management to discover compliance issues and escalate as needed. At the same time, I was creating reports (weekly or monthly) according to working instructions or on-demand, analysing root cause for bad results while escalating and tracking the resolution. Create TCP/IP scan reports and provide them to the Delivery Project Executive.

EDUCATION AND TRAINING

31/03/2020 – CURRENT London, United Kingdom
MCS CYBERSECURITY University of Essex

Website https://online.essex.ac.uk |

Thesis Network Segmentation and Enhancing Security in Hybrid On-Premises and Cloud Infrastructure

14/03/2016 – 30/04/2020 California, United States
COMPUTER SCIENCE, 4 YEARS - BACHELORS DEGREE (BS) University of The People

Website https://www.uopeople.edu

28/02/2022 – 06/03/2022 Bruxelles, Belgium
CISCO ACI EEAS

31/05/2018
PCNSE COURSE Extelligence

Prague, Czechia
PALOALTO FIREWALL 8.0 AND FIREWALL 7.1 NNIT

Brno, Czechia
CHECKPOINT BASIC & ADVANCED AT&T

Brno, Czechia
SWITCHING AND ROUTING BASIC & ADVANCED AT&T

Brno, Czechia
CISCO ASA/PIX BASIC AT&T

12/2013 – 06/2014 Brno, Czechia
3RD LEVEL MENTORING PROGRAM AT&T

Focus on individual training and labs so that the trainee will reach as fast and efficient as possible the potential 3rd level position in the company.

- training on logical path taken in troubleshooting an incident.
- training on communication and attitude in conference calls with customers or remote partners.
- training on providing simple and transparent explanation of an issue to non-technical people.

PROJECTS

Projects

Developed my own Infrastructure network (Lab environment) based on ESXi 6.5 Hypervisor on a HP DL360 G7 server containing the following:

- 20xCSR1000v routers used for simulating different environments scenarios - from ISP to LAN testing different routing protocols (BGP, OSPF, EIGRP)
- 2xBIGIP F5 LTM with 3 web servers for load balancing lab - with 90 days trial license
- 2xASAv firewalls
- 2x Checkpoint R77.30 firewalls with one R77.30 SmartCenter
- VCenter 6.0 Appliance for managing and manipulating VMs
- Windows Server 2012 R2 used for DNS DHCP and AD
- 2x PaloAlto Firewall.
- 1x PaloAlto 220 Physical Firewall.

CERTIFICATIONS

Palo Alto Networks Certified Network Security Administrator (PCNSA)

Amazon Web Services Practitioner (AWS Practitioner)

ITIL v4 Foundation

Cisco Certified Network Associate (CCNA)

Cisco Certified Network Professional (CCNP)

SKILL SUMMARY

Skill Summary

Networking & Security
Cisco Routing, Switching and Security (CCIE / CCNP Level), Wireless (CCNA Level),
Cisco Meraki, Cisco ISE, ACI
Checkpoint FW
Palo Alto NGFW
Load balancing - F5 LTM/GTM; Cisco ACE,
Bluecoat Proxy
Mikrotik Router board / wireless

Operating Systems
Linux (Ubuntu, Centos, OpenSuse)
Windows Server 2012
Mac

Storage
Synology

Cloud & Virtualization
AWS (Practitioner – studying for Associate Solution Architect)
DigitalOcean
OpenStack

VMware (VSphere & VCenter)

Monitoring
PRTG - monitoring tool
Nagios

Programing languages
Python
Swift

MOTIVATIONAL TARGETS

Motivational targets

- continuous improvement in the professional activity
- working in a dynamic and competitive environment and with good perspectives, in a multicultural environment
- being a part of a motivated and determined team
- learning new things and getting the optimum combination with the personal skills
- finding new career opportunities
